

### CONTENTS:

Your card content must not exceed the safe area line (blue). The safe area line is placed 3mm inside each side of the cut line (magenta).

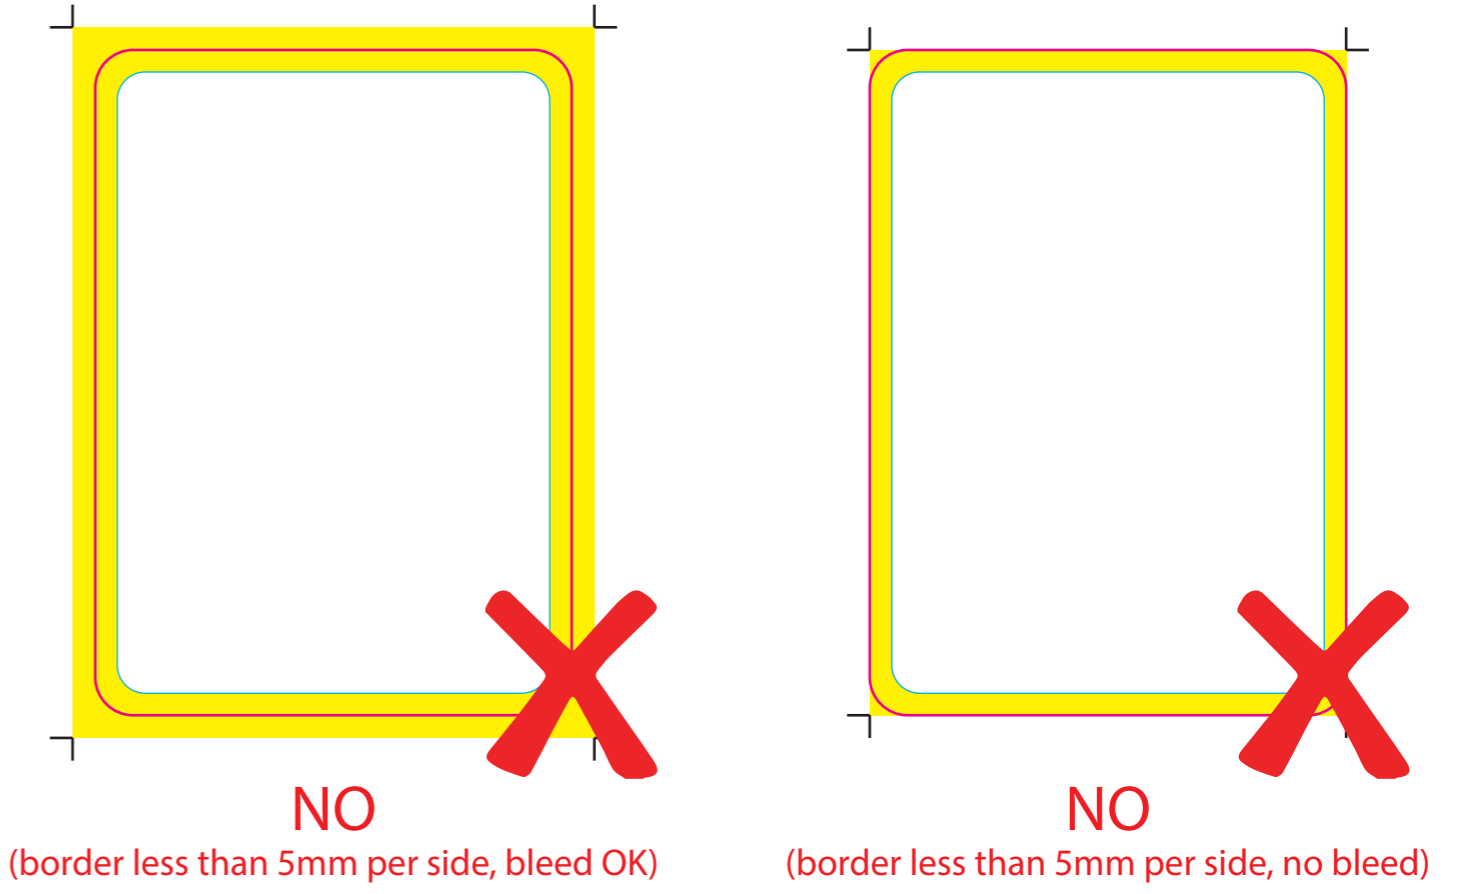

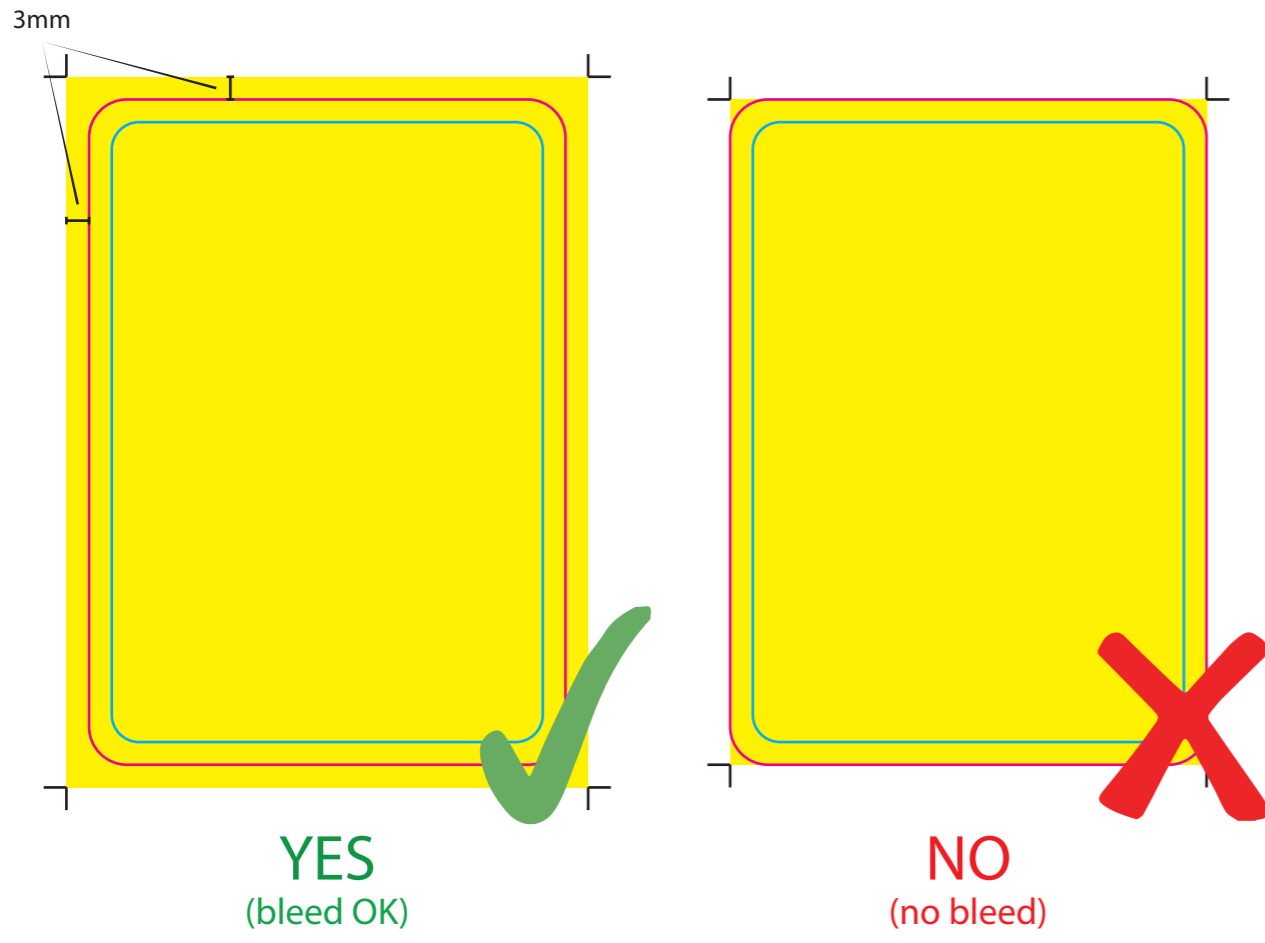

### PRINTED AND WHITE BORDERS:

In case you want to use borders on your cards, we suggest to consider at least a 5mm border from the cut line (magenta). For better results we strongly suggest to apply the border on a single side only: digital printing does not guarantee perfect front/back registration.

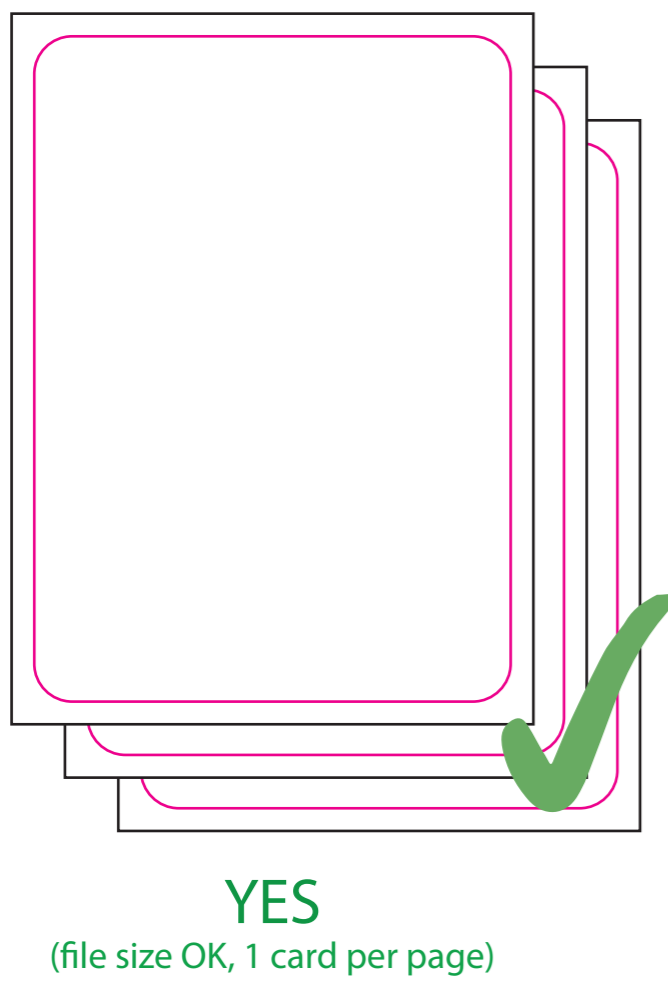

### BACKGROUNDS:

Your background (picture or tint) must exceed the cut line (magenta) by at least 3mm. The background must not have round corners.

### READY TO PRINT FILES:

When uploading files, JPG, PNG or PDF files are accepted. PDF can be multipage and there must be one page for each card of the deck. Separate files for fronts and backs must be supplied, with cards in the right sequence in case of multipage PDF file.

### TEMPLATE LINES:

When using our template, any line supplied on the template must be removed from the file. The size of the template or its position must not be changed, nor the file size.
